The Raspberry PI SAFE

We're anticipating the release of the Raspberry PI, and while we wait for our order to get filled, we've *attempted* to put together an acrylic mounting box for it. NOT guaranteed to work until we physically fit one, but in the meanwhile, here's what we've got!

This layout features both a regular and LCD_compatible backplane mount. Handy handy!

- Parts required:
- 3mm Acrylic
- 8 x #4-40 x 3/8 Bolts
- 8 x #4-40 Hex Nuts
- 4 x #4 Nylon spacers
- 4 x Little Rubber Feet (aka: LRF)
